

The soft close mechanism for Lemans II have been modified for a better efficiency.

Advantages

- Equipped with a combination of spiral spring and a gas piston allowing a better tolerance and a more constant closing speed.
- The spiral spring has lower noise, so less clicking sound.
- The gas piston controls the first part of the closing phase and the spiral spring acts at the final phase. The opening is then more comfortable and allows to the gas piston to retrieve its original position faster.
- The closing process is then faster and the final phase is more soft.
- This new version offers a longer lasting life time, more constancy and no lost of efficiency over time.
- Sold by pair for the 2 shelves application.

New version :
now with a spiral spring and gas piston

Old version :
with a pneumatic spring
