

HAWA®

HAWA-SoundEx: stops transmission of structure-borne noise. The sound-absorbing bracket that puts a hush on sliding hardware.

HAWA - SoundEx

Patent pending

Sliding action doesn't get

any quieter than this.

HAWA-SoundEx plus

HAWA-Junior sliding systems.

Perfection right down to the details

In sensitive areas like apartment buildings, homes, clinics, and other places where sliding installations are frequently moved, neglect of special building requirements often produces a need for post-construction sound insulation measures.

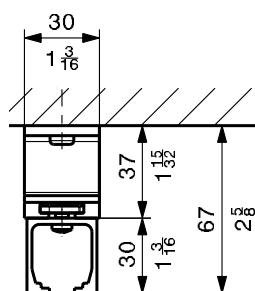

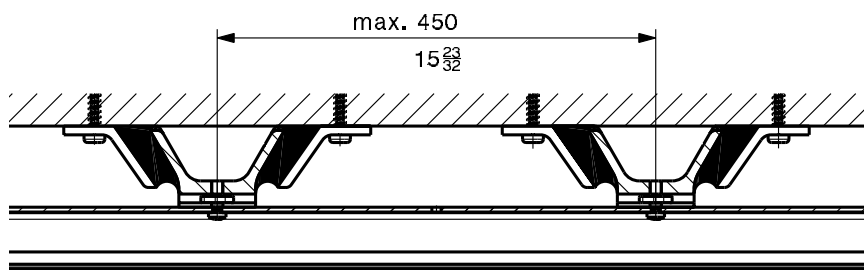

HAWA-Junior sliding systems run gently and quietly to begin with. But combined with HAWA-SoundEx, all that is heard is the sound of silence. The rubber layer absorbs the vibration caused by sliding motion, decoupling it from adjacent rooms and building floors.

Simple fitting

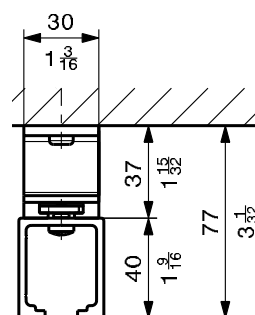

HAWA-SoundEx sound-absorbing brackets attach simply and quickly to the ceiling. Top tracks then clamp easily to the brackets using groove nuts and the original holes – no additional drilling is required.

Convincingly quiet

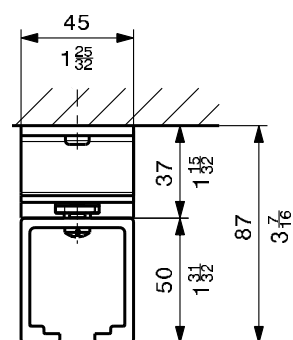

Measurements prove it: HAWA-SoundEx reduces transmitted noise to practically zero. The sound of sliding motion thus becomes inaudible in adjacent rooms.
