AUF720x Ultraguard[™] Neutral CV Topcoat

GENERAL INFORMATION

Axalta's Ultraguard[™] Neutral CV Topcoat is a premium quality neutral post-catalyzed varnish finish coat formulated to offer superior durability. It is recommended for use over Axalta's Ultraguard[™] Primers and is available in a full range of gloss. This coating must be tinted to medium or dark tones for best results. This coating technology has the added benefit of being low in formaldehyde.

1. PRODUCTS

• AUF7201 – Matte • AUF7202 – Satin • AUF7204 – Soft Gloss AUF7215 - Satin/Matte

AUF7209 - Gloss

2. MIXING RATIO

• All products should be stirred well before use and, for best results, continuously agitated while in use.

Catalyzation: 10% 399-5003 by volume only

3. SHELF LIFE @ 77°F (25°C)

• 18 months from manufacturing date

4. CLEAN UP

• Dispose of dirty solvent and cleaning rags in a safe and compliant manner. Solvent or lacquer soaked rags should be stored in water-filled, closed containers prior to disposal.

5. ADDITIVES

• In the event of blushing or blistering, add Axalta 390-9303 Lacquer Retarder to extend dry time. See Additional Notes portion of this document for details.

| M | |
|----|--|
| i. | |

6. SURFACE PREPARATION

• Surface must be clean and dust free with a moisture content of 6-8% prior to finishing. Remove all dust, dirt, wax and wood marks. Proper sanding and preparation of the wood is critical to achieving consistent results.

- On new wood, finish sand surface with 150-180 grit sandpaper
- On previously finished wood, remove all old paint or varnish and follow new wood procedure.

7. COMPANION PRODUCTS

• AUF7000 & AUW7000 Ultraguard™ CV Primers

8. TECH NOTES

• Reduction is necessary, use Axalta YYT7169 catalyzed system reducer or other approved thinner. See Additional Notes portion of this document for details.

9. SUBSTRATES

Commonly used furniture and cabinetry woods
MDF/HDF

NOTE: Not to be used on exterior applications

10. APPLICATION

• See Application Notes for additional details.

11. FLASH / DRY TIMES

AUF720x Ultraguard™ Neutral CV Topcoat

Date: February 2nd 2022 (supersedes all previous revisions)

Application Notes:

All products should be stirred well before use and, for best results, continuously agitated while in use. Do not mix with other finishing systems or deviate from these finishing recommendations. Axalta will not be held liable for finish failures resulting from the mixing of products or deviations from finishing recommendations. Sanding should be completed immediately prior to the application of any additional coats.

1) **Basecoat:** For best results tint the basecoat or primer to similar color as the AUF720x topcoat. Please refer to the TDS for the appropriate primer being used for tinting instructions as well as catalyzing instructions. Continue agitating and apply the undercoat in one smooth, even application of 3–4 wet mils. Allow a minimum of 30 minutes dry time. Sand with 180–240 grit stearated, silicon carbide sandpaper. For MDF substrates, a second coat and re-sand may be required for complete sealing and to achieve desired coverage.

Reduction is necessary, use Axalta YYT7169 catalyzed system reducer or 390-7001/YYT1090 Lacquer thinner. See Additional Notes portion of this document for details. In the event of blushing or blistering, add Axalta 390-9303 Lacquer Retarder to extend dry time. See Additional Notes portion of this document for details.

2) **Topcoat:** Choose the appropriate sheen from AUF720x series. AUF720x should be tinted with Opticolor XP, Chroma Flo 866/844 or other approved industrial colorants. Maximum levels of tint must not exceed 8% by weight. **NOTE:** Use of any and all umber pigments (raw umber, burnt umber, other) should be avoided or limited as this pigment is known to inhibit cure in conversion varnish products. Agitate AUF720x well prior to use. Continue agitating and catalyze the topcoat 10% by volume with 399-5003 catalyst (see front) Reduction required (see additional notes) Continue agitating and apply the topcoat in one smooth, even application of 3–4 wet mils.

IMPORTANT NOTE: System's total dry film build should not exceed **6 dry mils.** A higher build may result in a film breakdown or reduction in performance.

Clean Up:

Use lacquer thinner to clean equipment. Refer to your local regulations for compliance requirements for cleaning thinners, or use recommended Axalta Lacquer Thinner. Dispose of dirty solvent and cleaning rags in a safe and compliant manner. Solvent or lacquer soaked rags should be stored in water-filled, closed containers prior to disposal.

Precautions:

These products are recommended for professional application and are designed for interior use only. Always pre-test the system on your substrate and under your line conditions to verify suitability to the application and to avoid potential need for costly refinishing. Axalta Industrial Wood Coatings are designed to protect and enhance the natural beauty of wood, but cannot eliminate natural discoloration or deterioration of wood as it ages.

Additional notes:

Do not mix with other finishing systems or deviate from these finishing recommendations. Axalta will not be held liable for finish failures resulting from the mixing of products or deviations from finishing recommendations.

| Catalyzation: | 10% 399-5003 by volume only |
|---------------|--------------------------------|
| Pot-Life: | Max. 24hrs, 12hr recommended* |
| Reduction: | Max. 20-30% by vol. YYT7169 or |
| | 390-7001/YYT1090 thinners** |
| Retarder: | Max. 5% by volume 390-9303 |

* Although max pot-life has been established, recommended procedure is to catalyze products for use within a production day (<24hrs)

**As allowable within regulatory compliance requirements

Storage:

Store in a cool, dry place. DO NOT FREEZE! Product should be stored in temperatures between 50°-110°F. Close all containers after use. Do not store near heat or sparks. Spills should be cleaned up with non-sparking tools. <u>See the</u> product SDS for complete safety information.

Warning:

Always pre-test the system on your substrate and under your line conditions to verify suitability to the application and avoid potential need for costly refinishing. All dry times listed are as tested under ideal indoor environmental conditions of 78°F (26°C) with relative humidity not exceeding 50%. These products are recommended for use under temperature conditions of 60-100°F (16-38°C) and when relative humidity is below 50% during application and drying time. Low temperatures, poor air circulation or high humidity will extend dry times. Axalta strongly recommends against use of these products if temperatures of air, material, or surface to be coated are below 60°F (16°C) or below the dew point. Abnormal conditions of temperature or humidity may adversely affect product performance. Please contact your authorized Axalta Industrial Wood Coatings distributor for additional product use recommendations and finishing quidance.
