

# TOTAL TOOL CARE

Shop tools are a major investment that can last for generations with the proper maintenance.

The best way to maintain and protect these tools are with Boeshield T-9®'s Total Tool Care set!

## Boeshield T-9®

Rust and corrosion protection, along with waterproof lubrication developed by The Boeing Company\*. Spray on saw tables, tools, and more. For a thin film, spray and wipe off or spray and let set for long term storage protection. Does not contain silicone or Teflon.

## Rust Free™

Removes rust and stains from surfaces, including cast iron and steel. For light rust, spray on a clean rag and wipe off. For heavier rust, spray surface thoroughly, let set for 30-60 seconds, then use a Scotch-Brite® pad to scour clean.

## Blade & Bit™

Removes resin, gum and pitch from saw blades, drill bits, tool tops, and more! Spray on thoroughly wetting the surface. Allow to penetrate for 30-60 seconds, then wipe off. For smaller more intricate areas use a wire brush to scrub away resin, gum and pitch.

# Rust Protection for Woodworking Tools

Boeshield T-9® is a solvent and paraffin wax formula developed and licensed by The Boeing Company\* for long term metal protection. It can be used on all tool surfaces where sliding, lubrication and protection are needed.

Boeshield T-9® penetrates metal pores, displaces moisture, and sets to a thin waxy film that will protect equipment for months.

Since it contains no silicone or teflon and dries quickly when wiped off, it will not pick up on wood surfaces nor interfere with subsequent finishing.

## Suggested Uses:

- Saw Table Tops
- Planer Jointer
- Radial Arm
- Drill Press
- Saw Blades
- Drill Bits
- Chisels
- Hand Tools

## Directions For Use:

Working Machinery: Spray on and wipe off. Repeat approximately once per week

Storage Protection: Spray on and allow to set. Repeat every 6-12 months. Respray and wipe off when ready to use.
