

Single adapter with depth and sideways adjustment and release device. Without assembly stop device.

HDP53NB - beige

Packing

Boxes 150 pcs.

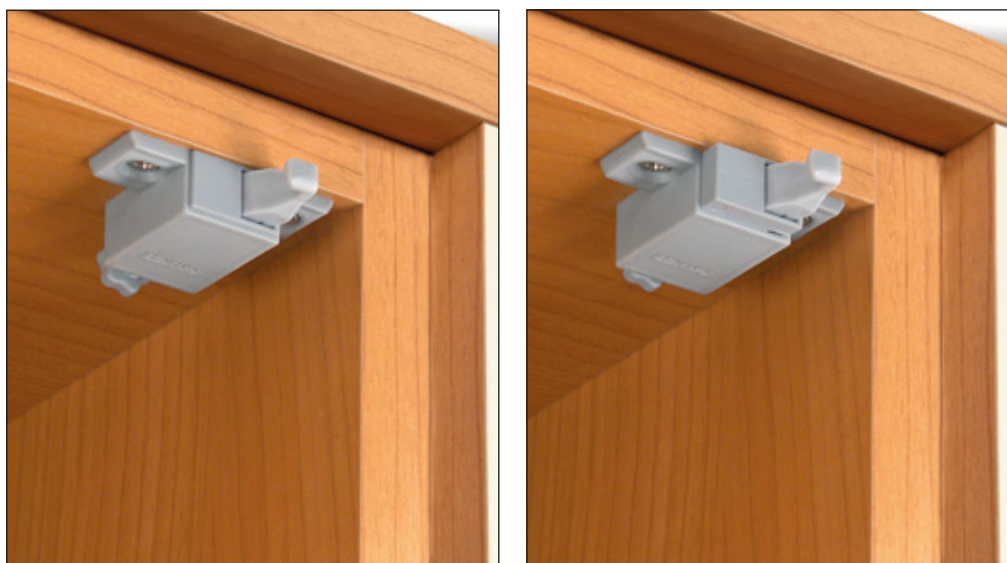

Technical information on the adjustable mechanical Push

The adjustable Push consists of a release device and a screw-fixed adapter which have been developed to improve the locating action of the system.

The adjustable Push now has a depth adjustment facility with a range of -1 mm to + 2.5 mm which is controlled by a small adjuster wheel located at the back of the adapter.

In addition, the adapter has a sideways adjustment facility of ± 2 mm.

This is achieved by loosening the two fixing screws and adjusting the position of the adapter using the elongated holes. Finally, the screws must be retightened.

Double Push with depth and sideways adjustment
