- Due to missing tests no recommendation to the glove material can be given for the product.

- Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation

- The glove material has to be impermeable and resistant to the product.

- **Material of gloves**

- The selection of the suitable gloves does not only depend on the material, but also on further marks of quality and varies from manufacturer to manufacturer. As the product is a preparation of several substances, the resistance of the glove material can not be calculated in advance and has therefore to be checked prior to the application.

- **Penetration time of glove material**

- The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.
