

veneer sheets and **EDGE BANDING**

veneer sheets and edgebanding

Carefully manufactured
for lasting beauty

Consistent Elegant

CEDAN Industries is a recognized leader in wood veneer and edgebanding manufacturing in America. Their team of craftsmen use the best materials and the latest technologies to create their natural-looking real wood, Evolution HD veneers, and textured veneer collections.

The finest woods and the highest standards. No matter how you cut it, at CEDAN...quality is for the love of wood!

Design **A**tractive **N**atural

CEDAN OFFERS:

- A full range of tenderized veneers and edgbanding manufactured from domestic and exotic wood
- Edgbanding in a wide variety of thicknesses, widths, and lengths
- Flexible products suitable for curved applications
- A large selection of wood species and a full range of backers and finishes
- An engineered veneer program through the Evolution HD and textured collections
- Greenguard certified products in the real wood collection

EDGEBANDING

CEDAN's wood edgework matches any veneer perfectly because it is offered in the same wood species as the tenderized sheets. It is the obvious solution for finishing your projects.

THIN EDGEBOARDING

- Thickness: 0.5 mm
- Width: Up to 11" (280 mm)
- Available with fleece backer or pre-coated with hot melt adhesive
- Versatile and easy to apply

THICK EDGEBOARDING

Increases impact resistance and eliminates the warping problems encountered with solid wood strips. This edgework can produce radius profiles equivalent to its thickness while its superior flexibility allows for contouring small radii.

- Ideal for creating rounded edges
- Thickness: From 1 to 3 mm (approx. : 1 mm, 1.5 mm, 2 mm, and 3 mm)
- Width: Up to 11" (280 mm)

THIN

THICK

ASSEMBLY TYPES

THIN and **THICK** edgebanding are offered with **MICRO-JOINTS** or **STANDARD JOINTS**

MICRO-JOINT

- Wood grain matched at the joint
- For all types of veneer with a thickness of 0.5 to 2 mm
- Fleece joint replaced with an adhesive so that the colour and the wood grain can be perfectly matched
- Virtually invisible finger joint for easy finishing and staining
- Flexible joint allows for a tighter radius of curvature
- Strong joint ideal for projects with thick edgebanding

STANDARD JOINT

- For all types of veneer with a thickness of 0.5 to 3 mm
- Wood grain matched at the joint
- Uneven finger joints
- Ideal for stain-free applications

Recommended uses:

- **Standard joint:** For varnishing only
- **Micro-joint:** For staining and varnishing

GRAIN DIRECTION: **HORIZONTAL**

The direction of the grain or pattern will always be parallel to the panel width and suited for standard application.

- Thickness: From 0.5 to 3 mm
- Width: Up to 11" (280 mm)

GRAIN DIRECTION: **VERTICAL** (short grain)

The veneer pattern is vertical with respect to the edgebanding and, unlike horizontal edgebands, doesn't parallel the length. The sides or the edges can therefore be highlighted and emphasized, creating an eye-catching visual effect.

- Thickness: From 0.5 to 1 mm
- Width: Up to 11" (280 mm)
- Ideal for creating a wood board effect

TENDERIZED VENEER SHEETS

CEDAN's real wood veneer sheets are book-matched and tenderized to make them perfectly flexible. The sheets are pre-sanded and carefully laminated under heat and pressure according to the backer selected. CEDAN is the gold standard in flexible wood veneer!

TEXTURED VENEER -
EVOLUTION HD

Sizes

48" x 96" (1220 x 2438 mm) | 48" x 120" (1220 x 3048 mm)

Other sizes available upon request.

REAL WOOD VENEERS -
EXOTIC SPECIES

OUR COLLECTIONS

REAL WOOD VENEERS

Thanks to their real wood veneer program, CEDAN helps you take advantage of nature's charm in all its forms. Each sheet contains pattern variations and unique colours characteristic to each species (domestic or exotic).

EVOLUTION HD VENEERS

These composite wood products are manufactured from fibres, wood or veneer to ensure the realistic appearance of the material. Choose the veneer that combines consistency, elegance, design, attractiveness, and natural appeal. The perfect product for your large-scale projects!

- Uniform colours and patterns from one sheet to another
- Match the pattern even months later
- Use of raw materials without damaging the environment

TEXTURED VENEERS

The textured sheets are made from real wood veneer carefully selected to achieve dramatic results when combined with different textures.

- Many natural wood patterns (domestic and exotic species)
- Evolution HD Collection patterns
- Laminated and pre-finished veneers

4 BACKER TYPES

PAIR THE VENEER SHEETS WITH THE BACKER OF YOUR CHOICE

- **10 Mils Backer:**
For hot or cold laminating
- **20 Mils Backer:**
Eliminates the most imperfections
- **PB Beige or PB Brown Backer:**
Resistant to impacts and moisture, eliminates imperfections, and offers superior stability. A stain and a finish can be applied before installation.
- **Wood-on-Wood (2-Ply):**
Eliminates imperfections and can be stained and finished before installation.

The paper acts like a barrier between the veneer and the surface being covered, preventing any risk of contamination between the adhesive and the finishing products. All veneer sheets have backers to increase the stability of the final product.
